Process Safety Culture Assessment – Quick Guide

An offline survey and facilitator review built on the 10 core principles of CCPS (2018), *Essential Practices for Creating, Strengthening, and Sustaining Process Safety Culture*. One HTML file: runs from a USB stick, a laptop or a phone browser. Survey in English and Arabic.

1 Set up
Name the assessment. Note the 4-character survey code.

2 Survey
50 statements, 10–15 min, anonymous. On this device or on people's own phones.

3 Facilitator review
Interviews, documents, site walk. Rate 1–5 and tick red flags.

4 Results
Radar, group gap, weakest statements, red flags.

5 Action plan
Actions, owners, dates. Repeat in 12–18 months.

Collecting survey responses

Where people answer	How
On one laptop or tablet (training room, control room)	**Take the survey** → language, survey code, group → 10 parts → Finish → **Next person**. The response is stored straight away.
On their own phones	Send the link shown in **Set up** (ends in `#survey=CODE`). At the end each person sees a **response code** (PSC1-…) and sends it to you by WhatsApp or e-mail. Paste all codes into **Responses** → Add codes. Duplicates and typing errors are caught.

Anonymity: no names are asked. A group's scores are only shown when it has 5 or more responses; smaller groups still count in the overall score. Brief people that the survey is about the system, not about them.

The 10 principles (tool code)

IMP	Establish an Imperative for Safety	EMP	Empower Individuals to Successfully Fulfill their Safety Responsibilities
LEAD	Provide Strong Leadership	EXP	Defer to Expertise
TRUST	Foster Mutual Trust	DEV	Combat the Normalization of Deviance
COMM	Ensure Open and Frank Communications	LEARN	Learn to Assess and Advance the Culture
VULN	Maintain a Sense of Vulnerability		
HAZ	Understand and Act Upon Hazards/Risks		

Reading the results

What	How it is worked out	What to look for
Score 0–100	(answer − 1) ÷ 4 × 100, averaged per principle. Negative (reverse) statements are flipped. Don't know is left out.	Below 50 = priority; 50–69 = improve; 70+ = strength.

Gap	Managers + supervisors minus front line (operators, maintenance, contractors).	+15 or more: leaders see a better culture than the people at the plant.
Weakest statements	The 8 lowest-scoring statements, with % Agree / Strongly agree.	Specific topics for interviews and actions.
Don't know ≥ 25 %	Share of Don't know answers per statement.	Awareness gaps: people are not told, or not involved.
Facilitator rating 1–5	1 Absent · 2 Weak · 3 Developing · 4 Established · 5 Strong.	Where the survey and your evidence disagree, find out why.

Saving and printing

Work is kept in the browser on that device. Use **Save / open** to download the whole assessment (.psc.json) and to open it on another computer. **Print report** prints the results page (or Save as PDF). Responses and the summary export to CSV for Excel.

The survey statements are original wording mapped to the CCPS core principles; they are not the CCPS Appendix F protocol text. A screening and discussion tool – it does not replace a formal culture assessment by competent people. Arabic translation is a draft until reviewed by a native speaker.
